

Cloud Access Governance Dashboard

IAM Governance Audit Report

Group 12 | INFO49402 | v2.0

Team: Amandeep Singh, Gurpreet Kaur, Yashdeep Singh, Amna Rafiq

Report Date: 2026-05-30

Executive Summary

This report summarizes the results of an automated IAM governance audit conducted against the AWS environment. The pipeline collected IAM user and policy data, evaluated it against defined governance baselines, and scored each finding by severity. A total of **10 finding(s)** were identified across **6 user(s)**.

| Severity | Count | Priority  | Action Required              |
|----------|-------|-----------|------------------------------|
| CRITICAL | 0     | Immediate | Remediate within 24 hours    |
| HIGH     | 0     | Urgent    | Remediate within 1 week      |
| MEDIUM   | 0     | Moderate  | Remediate within 1 month     |
| LOW      | 0     | Low       | Address in next review cycle |

Findings are listed below in fix-first order (highest severity first). Each finding includes the affected user, the governance check that triggered it, and a recommended remediation action.

All Findings

| #  | User                       | Severity | Check               | Detail                                                                                                                                        | Score |
|----|----------------------------|----------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|-------|
| 1  | test-admin                 | CRITICAL | MissingMFA          | User has no MFA device attached                                                                                                               | 10    |
| 2  | test-no-mfa                | CRITICAL | MissingMFA          | User has no MFA device attached                                                                                                               | 10    |
| 3  | test-old-key               | CRITICAL | MissingMFA          | User has no MFA device attached                                                                                                               | 10    |
| 4  | test-wildcard              | CRITICAL | MissingMFA          | User has no MFA device attached                                                                                                               | 10    |
| 5  | amandeep-admin             | HIGH     | AdminPermissions    | User has AdministratorAccess policy attached                                                                                                  | 8     |
| 6  | test-admin                 | HIGH     | AdminPermissions    | User has AdministratorAccess policy attached                                                                                                  | 8     |
| 7  | test-old-key               | HIGH     | OldAccessKey        | Active access key — age: 113 days                                                                                                             | 8     |
| 8  | test-wildcard              | HIGH     | WildcardPermissions | Inline policy 'wildcard-policy' contains wildcard Action or Resource (*)                                                                      | 8     |
| 9  | [ROLE]<br>test-broad-trust | HIGH     | RiskTrustPolicy     | Role 'test-broad-trust' trust policy allows account root principal (arn:aws:iam::238483662674:root) — entire AWS account can assume this role | 8     |
| 10 | amandeep-admin             | MEDIUM   | AccessKeyPresent    | Active access key — age: 61 days                                                                                                              | 5     |

## Per-User Risk Breakdown

The following section groups all findings by user and shows an individual risk score total for each account.

| test-admin       |          |                                              | Total Risk Score: 18 |                                                          | Findings: 2 |  |
|------------------|----------|----------------------------------------------|----------------------|----------------------------------------------------------|-------------|--|
| Check            | Severity | Detail                                       |                      | Recommendation                                           | Score       |  |
| MissingMFA       | CRITICAL | User has no MFA device attached              |                      | Enable MFA immediately for this user                     | 10          |  |
| AdminPermissions | HIGH     | User has AdministratorAccess policy attached |                      | Replace with a least-privilege policy scoped to job role | 8           |  |

| test-old-key |          |                                   | Total Risk Score: 18 |                                      | Findings: 2 |  |
|--------------|----------|-----------------------------------|----------------------|--------------------------------------|-------------|--|
| Check        | Severity | Detail                            |                      | Recommendation                       | Score       |  |
| MissingMFA   | CRITICAL | User has no MFA device attached   |                      | Enable MFA immediately for this user | 10          |  |
| OldAccessKey | HIGH     | Active access key — age: 113 days |                      | Rotate or disable this key           | 8           |  |

| test-wildcard       |          |                                                                          | Total Risk Score: 18 |                                                                                    | Findings: 2 |  |
|---------------------|----------|--------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------|-------------|--|
| Check               | Severity | Detail                                                                   |                      | Recommendation                                                                     | Score       |  |
| MissingMFA          | CRITICAL | User has no MFA device attached                                          |                      | Enable MFA immediately for this user                                               | 10          |  |
| WildcardPermissions | HIGH     | Inline policy 'wildcard-policy' contains wildcard Action or Resource (*) |                      | Replace wildcard statements with specific actions and resources scoped to job role | 8           |  |

| amandeep-admin   |          |                                              | Total Risk Score: 13 |                                                          | Findings: 2 |  |

| RiskTrustPolicy         | HIGH     | Role 'test-broad-trust' trust policy allows account root principal (arn:aws:iam::238483662674:root) — entire AWS account can assume this role |                     | Restrict the trust policy Principal to specific trusted roles or services only | 8           |  |

## Governance Baseline Coverage

The table below maps each governance check to the security principle it enforces and its current coverage status.

| Check               | Principle              | Severity      | Status    |
|---------------------|------------------------|---------------|-----------|
| MissingMFA          | MFA Enforcement        | CRITICAL      | ✔ Active  |
| AdminPermissions    | Least Privilege        | HIGH          | ✔ Active  |
| AccessKeyPresent    | Key Rotation / Hygiene | MEDIUM / HIGH | ✔ Active  |
| WildcardPermissions | Least Privilege        | HIGH          | ■ Phase 2 |
| RiskTrustPolicy     | Trust Boundaries       | HIGH          | ■ Phase 2 |
